

DATA MANAGEMENT THAT WORKS FOR YOU—HPE NIMBLE STORAGE WITH VEEAM

Keep your mission-critical apps functioning

DOWNTIME AND DATA LOSS CAN BE CATASTROPHIC

71% of organizations can only tolerate less than one hour of downtime for high-priority applications before invoking a failover.¹

47% of organizations are not confident that their backup and recovery processes are sufficient for their hybrid environment.²

DATA PROTECTION IS NOW INCREASINGLY CHALLENGING

Today, the impact of disruption is high. Yet, 77% of organizations don't have an effective data protection strategy in place.³ What's more, even as companies turn to virtualization for improving efficiency, increasing workload performance, and enhancing business continuity, new challenges for data protection and recovery emerge.

You need data protection solutions that are purpose-built for virtual environments without creating resource bottlenecks. Finding faster, simpler, and more affordable ways to ensure data and application availability is a business necessity.

TIME TO SAFEGUARD YOUR DATA INTELLIGENTLY

Veeam and HPE Storage technologies have teamed up to provide a complete, end-to-end data protection strategy to meet critical data recovery and retention requirements.

How does it work?

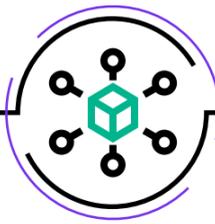

You get application-consistent data protection through a combination of HPE Nimble Storage snapshots and Veeam Backup and Replication backups. HPE Nimble Storage takes snapshots of VMware volumes without impacting production workloads and Veeam makes backups from a secondary HPE Nimble Storage array.

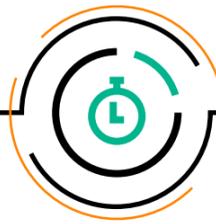

With the integration between HPE Nimble Storage snapshots and Veeam software, you get:

Instant recovery from any one of the snapshots within minutes—downtime reduces while workload availability improves.

Significantly higher recovery point objectives (RPOs) with multiple up-to-date recovery points—data loss is minimal and your data is up to date.

Recovery time objectives (RTOs) that are less than five minutes⁴ and your data recovery is quick, thanks to snapshots that could be just minutes old.

The HPE Nimble Storage with Veeam solution offers a near-continuous data protection strategy without additional cost or complexity—making it ideal for organizations that want to standardize HPE Nimble Storage for snapshot replication and backup target. What's more, you can benefit from simplified billing and support with consumption-based data management when purchasing Veeam through HPE GreenLake—a pay-as-you-go model with complete metering.

A DATA PROTECTION SOLUTION THAT KEEPS GIVING

Hassle-free data availability with HPE InfoSight and Veeam ONE

- Intelligent operations—Predict, prevent, and resolve issues before they arise
- No more guesswork—Get accurate forecasts, capacity planning, and complete visibility into your data
- For data that grows—Scale capacity and performance independently and non-disruptively

Enhanced business continuity

- Achieve flash performance at a fraction of the cost
- Free-up production infrastructure by making backups from replicated snapshots
- Accelerate secondary workloads and put your backup data to work

MAKE THE RIGHT CHOICE NOW

Businesses need data and applications to be available—24x7x365. And the need for reliable data recovery is crucial. HPE Nimble Storage with Veeam is the robust solution in this data-driven world—it is fast, simple, and automated giving you an infrastructure that practically manages itself.
